Cross receives Outstanding Performance Award from Pattonair

Cross Manufacturing Company, the world leading manufacturer of precision engineered high temperature metallic seals and retaining rings for aircraft engines, has received an Outstanding Performance Award from Pattonair, the UK-based supply chain service provider to the global aerospace industry.

The award recognises the excellent performance and service provided throughout 2015 by Cross to Pattonair, who are one of the world's largest procurers of aerospace products and the industry leaders in aerospace and defence supply chain management. Cross produces many high temperature piston sealing rings and retaining rings for Pattonair which are used in aircraft engines around the world.

The prompt delivery of these precision parts plays a critical role in supporting the stocking and distribution services provide by Pattonair to the engine manufacturers. Over the years, Cross has built up a close working relationship with Pattonair. In 2010 this was recognised with Pattonair's Gold Performance Standard Award.

In the photograph, members of the Cross team responsible for the Pattonair contract are pictured with the Outstanding Performance Award.
