

FTPublicity Client: Cross Manufacturing Company (Automotive)

23 June 2014

## Cross wins Cummins Turbo Technologies Supplier of the Year Award – two years in a row

For the second year running, the Cross Manufacturing Company has received the Supplier of the Year Award from Cummins Turbo Technologies. As in 2013, the 2014 award recognises the ability of Cross to meet strict quality and delivery targets set by Cummins.

Based in Huddersfield with a worldwide network of technical, manufacturing and service centres, Cummins Turbo Technologies is a market leader for turbochargers in the commercial vehicle industry, designing and manufacturing innovative products that meet the global challenges of emission reduction, fuel consumption and total cost of ownership for engine systems from 3 to 120 litres.

The precision engineering high temperature sealing technologies of Cross contribute to Cummins' success with a range of turbo shaft seal rings and variable geometry seal and retaining rings which enable the turbochargers to operate more efficiently. The scope of Cross supply encompasses rings and seals in a wide range of sizes and materials including stainless steel and nimonic alloys.

In the photograph, members of the Cross team responsible for the Cummins Turbo Technologies contract are pictured with the 2013 and 2014 Supplier of the Year Awards.
